CONTENTS

Introduction 4
Executive Summary 5
1. Current, Under Construction and Planned Capacity of UGS in the World 12
1.1 Current capacity of UGS in the world (end of 2025) 12
Global storage capacity established a new record in 2025 12
Top Ten league: China is now in third position 13
Global storage capacity growth has accelerated since 2022 14
Global working gas capacity accounts for almost 11% of 2025 gas consumption 14
Depleted fields dominate, but UGS in salt caverns is key to adding flexibility in gas markets 15
1.2 Storage projects 20
Pipeline of UGS projects under construction jumps to 100 20
Global working gas capacity to reach close to 520 bcm by 2032 22
Planned and potential projects would add 111 bcm 23
2. The Global Gas Reconfiguration: What Shifting Markets Mean for Security of Supply and UGS 26
2.1 Structural shifts in global gas markets 26
Geopolitical disruptions and infrastructure vulnerabilities 26
The technology and climate shifts 26
Interconnectivity of regional gas markets 27
2.2 Redefining security of supply 28
Strengthening the architecture of global gas supply security 28
Resolving the capital investment paradox 28
Managing rising demand variability in increasingly interconnected gas and power systems 28
2.3 The evolving regulatory framework, operational role, and investment landscape for UGS 29
Strategic gas reserves emerge as a new component of gas security-of-supply frameworks 29
From storage capacity to storage performance 31
Brownfield expansion becomes the dominant investment pathway 32
3. Major Trends by Region in 2025 and 2026 33
3.1 Europe: Challenging summer injections result in low winter gas stocks 33
EU UGS capacity amounts to one third of EU's annual gas consumption 33
The Gas Storage Regulation and its forthcoming evolution 35
Winter 2025/26 overview: Winter pressures met geopolitical tensions 36
Summer 2026: High prices, lower LNG imports and stronger demand weighed on injections 38
Winter supply outlook 2026/27 39
3.2 Ukraine enters the winter 2026/27 season with high stock levels 42
Stock levels reached a six-year high of 16 bcm by end October 2026 42
The 2025 supply crisis and import surge 43
Marginal imports in 2026 43
3.3 Russian UGS now mostly oriented towards domestic gas demand 44
UGS metrics remained almost unchanged in 2026 44
Winter 2025/26 46
Few investments in new storage capacity 47
3.4 United States: UGS is a growing strategic and commercial opportunity 48
A slight increase in UGS metrics in 2025 48
The redefinition of UGS economics: From seasonal spreads to a reliability premium 48
Gulf Coast salt caverns storage capacity to increase by 40% to 74% by 2030 50
Winter 2025/26 was mild despite Winter Storm Fern 52
Winter 2026/27: Strong production outpaces growing overall demand 54
3.5 China: UGS to grow 1.5 to 2 times faster during the 15th FYP 56
China again achieved a strong growth in UGS capacity in 2025 and 2026 56
Restructuring of the storage business 58
The strategic move towards salt caverns UGS 59
Infrastructure expansion under the 14th Five-Year Plan 59
15th FYP: UGS is the core contributor to the increase in gas storage capacity 61
Winter 2025/26 and the role of UGS 62

China: The flexible pivot for winter 2026/27 63
From domestic security to global leverage 64
3.6 Central and South America, and Mexico, advance UGS projects 65
Argentina: Growing investment in infrastructure, including in innovative storage models 65
Brazil: First UGS facility set to begin operations 66
Mexico: Strategic and commercial UGS projects to ensure energy security 68
3.7 Middle East: Energy security concerns elevate the role of UGS 70
Iran: High risk of severe supply restrictions during winter 2026/27 71
Saudi Arabia: UGS supporting gas expansion and power sector transformation 73
UAE: Expansion of UGS facilities to support rising intermittent power 74
Egypt: UGS as a critical enabler of gas security and regional hub ambitions 75
Israel: Exploring UGS to strengthen energy security 76
Annex: Methodology 78
