About the author	2
Executive summary	4
Introduction	6
1. A U-turn in the energy policy	7
1.1 Delivering safe and clean electricity.....	7
1.2 Current electricity supply and demand	9
1.3 Future electricity demand and supply: An overhaul in electricity generation.....	11
1.4 A slow move towards nuclear-free era	14
1.5 A small reduction in coal-based generation.....	16
1.6 Acceleration of the development of renewables.....	18
1.7 LNG generation to play a bigger role, but not in the short term	19
2. What impact on the LNG market?	21
2.1 South Korean gas market	21
2.2 Future LNG demand	23
2.3 LNG import infrastructure	24
2.4 LNG contracts and additional LNG requirements	25
2.5 Securing stable supplies of LNG	28
3. Meeting the challenges	31
3.1 Raising the contribution of renewable energy sources	31
3.2 Security of electricity supply	32
3.3 Competitiveness of electricity supply	32
3.4 Reflecting social and environmental costs.....	33
3.5 Narrowing the cost gap between coal and LNG.....	33
3.6 Reducing CO ₂ emissions and improving air quality	34
Conclusion	35
Annex 1: 8th Basic Plan for Long-Term Electricity supply and demand	36
Annex 2: Nuclear power plants	37
Annex 3: Coal power plants	39
Annex 4: Gas-fired power plants	40
Annex 5: South Korean LNG long-term contracts	41
