Executive Summary	4
1. Policy agenda: 2022, a crucial year for hydrogen.....	8
1.1 Drivers of the Dutch hydrogen policy.....	8
1.2 Strong foundations.....	9
1.3 The evolving European and Dutch policy context.....	9
1.3.1 The European context: energy independence joining the climate fight imperative	9
1.3.2 The Dutch policy: energy and climate at the center stage.....	12
1.4 The Strategy, the National Hydrogen Program and recent hydrogen policy developments.....	13
Role of hydrogen in a zero-carbon energy system.....	14
‘Colors’ of hydrogen and targets.....	15
Focus on the entire value chain	15
Phase approach to 2030.....	16
International dimension.....	16
Market regulation.....	16
Guarantees of origin and certification	18
Safety.....	18
Research & Innovation: towards 1-GW electrolyzers	18
1.5 Support to hydrogen technologies.....	19
1.5.1 Financial support under the Strategy.....	19
1.5.2 A substantial increase in support from 2022	19
1.5.3 Moving from support to hydrogen production to support to hydrogen use.....	23
1.6 Decarbonization of the five regional industrial clusters: a pillar of the hydrogen policy	25
2. Market development: Industry and transport are leading market uptake.....	26
2.1 Current hydrogen use.....	26
2.2 Projections of hydrogen demand by 2050	26
2.3 Main applications	28
2.3.1 Energy-intensive industries: refinery, chemicals and basic metals.....	28
2.3.2 Mobility	33
2.3.3 Power.....	39
2.3.4 Buildings	41
3. Hydrogen infrastructure: All starts with the backbone	42
3.1 Advanced plans to create the Dutch hydrogen backbone	42
3.2 The essential role of hydrogen storage.....	45
4. Hydrogen production: A European leader in the deployment of hydrogen.....	47
4.1 Current hydrogen production: EU second largest producer	47
4.2 Blue hydrogen projects	47
4.2.1 The role of CCS in the Dutch policy	47
4.2.2 Blue hydrogen projects in the Netherlands	50
4.2.3 A significant increase in blue hydrogen production by 2030, but less than expected one year ago	51
4.3 Renewable hydrogen: 11+ GW of electrolyzer capacity in the pipeline by 2030	51
4.3.1 The Netherlands has taken the lead in European announced electrolyzer capacity.....	51
4.3.2 A huge pipeline of projects.....	52
4.3.3 The crucial role of offshore wind	54
4.4 Hydrogen production from biomass	58
4.5 Future hydrogen production: the potential is high, but still uncertain	58

5. Imports and transit: The Netherlands as the gateway of NWE hydrogen imports.....	59
5.1 New EU and Dutch import ambitions.....	59
5.2 Key cooperation agreements	61
5.3 Hydrogen import plans: Ports’ ambitions begin to take shape.....	63
Rotterdam	64
Amsterdam/Northern Dutch ports	66
North Sea Port	67
Conclusion: Turning vision into reality	68
Annex 1: Regional industrial clusters in the Netherlands	69
Rotterdam-Moerdijk Cluster	69
Northern Netherlands	70
Smart Delta Resources (SDR)	71
Amsterdam/North Sea Canal Area (NSCA).....	72
Chemelot	74
Annex 2: Blue hydrogen projects in the Netherlands	75
Overview of blue hydrogen projects.....	75
Annex 3: Electrolyzer projects in the Netherlands	78
Overview of major electrolyzer projects.....	80
Annex 4: Hydrogen projects from sustainable biomass in the Netherlands.....	83
Main Abbreviations.....	84
List of Figures, Tables, Boxes and Maps.....	86
