Introduction.....	4
Executive Summary	5
1. Current, under construction and planned capacity of underground gas storage in the world	9
1.1 Current capacity of UGS in the world (end of 2022)	9
After several years of stagnation, global storage capacity has renewed with growth	9
Regional breakdown: North America leads the market	10
Top Ten league	10
The growth rate has not returned to pre-2015 levels.....	11
Working gas capacity accounts for 10.6% of 2022 gas consumption	12
Depleted fields dominate, but UGS in salt caverns is key to deliverability	12
1.2 Storage projects	15
The pipeline of UGS projects under construction has grown by 20% to 55 bcm	15
Identified projects would add 90 bcm.....	17
2. A new order for the global gas market and gas supply flexibility	20
2.1 Profound and structural changes on the global gas market.....	20
LNG imports have taken center stage in European gas supplies	20
A profound reshuffling of LNG flows driven by US flexible LNG	21
China is taking an active role in the rebalancing of the LNG market	22
Reduced flexibility in the EU gas market	23
The gas crisis has a lasting impact on European and global gas demand	24
Despite the easing of gas prices, the crisis is not over	25
2.2 Storage and flexibility under scrutiny.....	26
The crucial role of gas storage.....	26
New storage regulations around the world	27
Full stocks ahead of winter 2023/24	28
Looking for a new gas/LNG security of supply architecture: An extended role for the IEA.....	29
3. Major trends by region in 2022 and 2023	31
3.1 Europe: Increased storage capacity and full stocks	31
Europe is increasing its storage capacity.....	31
European gas stocks reached their absolute maximum on record	32
Europe is well-prepared for winter 2023/24.....	34
3.2 Ukraine: UGS storage used by European traders to store temporary gas surplus.....	36
Stock levels reached 16 bcm on 1 November 2023	36
European temporary gas surplus stored in Ukraine.....	36
3.3 Russia: Geological exploration under way to create UGS in the east of the country.....	38
Little changes to UGS metrics.....	38
The creation of UGS facilities in the east of the country is being investigated.....	38
3.4 United States: Strong increase in both LNG exports and stock levels.....	40
Working gas capacity almost unchanged	40
Stock levels at higher levels than their five-year averages in 2023.....	40
3.5 China: The acceleration of UGS build-out is bearing fruits.....	42
China achieved a record growth in UGS working gas capacity.....	42
UGS capacity has doubled since 2018	43
Together with LNG storage tanks, storage capacity accounts for 9% of gas demand	44
UGS capacity to double again by 2028	44
Heating season 2022/23 and winter 2023/24 preparedness.....	45
3.6 Central and South America, and Mexico, advance UGS projects.....	47
Argentina: UGS a niche market	47
Brazil: First UGS facility of the country to be launched soon	48

Mexico is finally going to build its first UGS facilities	49
3.7 The Middle East is expanding its storage capacity to meet increasing peaks in gas demand. 50	
Iran: Gas storage to fix winter gas supply imbalance	50
Saudi Arabia has commissioned its first UGS facility.....	50
Sharjah: Storage services agreement with Ras Al Khaimah	51
Annex: Methodology.....	52
List of Tables, Figures and Boxes	53
