

CONTENTS

- About the author 1
- Preface 3
- Executive Summary 4
- 1. The growth in global RNG production is accelerating 7**
 - 1.1 Global production reached 7.7 bcm in 2022 and around 9.5 bcm in 2023 7
 - 1.2 RNG offers a threefold GHG emissions mitigation effect and multiple other key benefits 9
- 2. Structural policy drivers: security of supply, decarbonization and methane emissions reduction 11**
 - 2.1 Security of supply at the top of the global policy agenda 11
 - 2.2 RNG is a key tool to meet mid-term decarbonization commitments 12
 - 2.3 RNG is crucial to deliver the Global Methane Pledge 14
- 3. Market push: major trends shaping the sector 17**
 - 3.1 First large-scale deals for unsubsidized biomethane 17
 - 3.2 The use of RNG as a vehicle fuel is leading development across the world 20
 - 3.3 Strategic players and financial investors are deploying significant capital into RNG 26
 - 3.4 Adoption of innovative technologies and expanded uses of RNG are gaining traction 33
- 4. Europe leads global RNG production with substantial growth 38**
 - 4.1 Growing RNG production 38
 - 4.2 The dynamism of national markets across Europe remains quite heterogeneous 39
 - 4.3 Thanks to its versatility, RNG has a wide range of applications in Europe 40
 - 4.4 Cross-border trade is rising 41
 - 4.5 Bright outlook for European RNG production 43
- Annex: Focus on selected EU biomethane markets 47**
 - Germany 47
 - France 49
 - Denmark 51
 - Italy 52
 - Netherlands 54
 - Sweden 56
- 5. North America: Impressive growth in US RNG market 58**
 - 5.1 United States: The Inflation Reduction Act is a game changer for the RNG sector 58
 - 5.2 Canada: RNG has entered a growth phase 63
- 6. China: the dawn is coming 66**
- 7. India: bio-CNG momentum is building 70**
- 8. Brazil: one of the fastest growing market 74**
- 9. RNG is going global: new producing countries 78**
- Conclusion: Massive growth by 2030 and beyond 80**
- Main References 82**
- Abbreviations 85**
- List of Figures, Tables, Boxes and Maps 87**
