

## CONTENTS

|                                                                                                  |           |
|--------------------------------------------------------------------------------------------------|-----------|
| About the author .....                                                                           | 2         |
| Preface .....                                                                                    | 5         |
| Key Takeaways .....                                                                              | 6         |
| Executive Summary .....                                                                          | 7         |
| Global Dynamics, Drivers and Challenges .....                                                    | 7         |
| Regional Insights .....                                                                          | 10        |
| <b>1. Global biomethane production is surging .....</b>                                          | <b>14</b> |
| 1.1 Global production reached 10 bcm in 2024 and 12 bcm in 2025 .....                            | 14        |
| 1.2 Policy drivers and new forces accelerating biomethane scale-up .....                         | 16        |
| 1.3 Availability of sustainable feedstock is not an issue, but mobilization is .....             | 20        |
| <b>2. Market push: Main structural trends shaping the sector .....</b>                           | <b>22</b> |
| 2.1 The use of RNG in road transport is leading development across the world .....               | 22        |
| Surging RNG demand by the road transport sector .....                                            | 22        |
| The US is the largest user of RNG in the transport sector .....                                  | 24        |
| Europe increased its use of bio-NGV by 42% .....                                                 | 24        |
| European bio-LNG capacity is surging .....                                                       | 25        |
| 2.2 Shipping emerges as a key market outlet .....                                                | 28        |
| Decarbonization of shipping: the methane pathway is the preferred route .....                    | 28        |
| 2025 test year: Bio-LNG bunkering has exploded in Europe .....                                   | 29        |
| A growing number of long-term bio-LNG bunkering contracts .....                                  | 31        |
| The marine bio-LNG market is going global .....                                                  | 33        |
| Global marine bio-LNG projections .....                                                          | 35        |
| 2.3 A growing use of RNG in the industrial sector, albeit still limited .....                    | 37        |
| European industrial BPAs dominated by hard-to-abate applications .....                           | 37        |
| North American voluntary market is limited .....                                                 | 38        |
| A surging Brazilian voluntary industrial market .....                                            | 39        |
| China's emerging large voluntary industrial market .....                                         | 39        |
| Towards a merchant biomethane market .....                                                       | 40        |
| 2.4 A shift to demand side incentives: biomethane quotas around the world .....                  | 42        |
| 2.5 Valorizing biomethane benefits beyond energy .....                                           | 45        |
| Rewarding positive externalities .....                                                           | 45        |
| Valuing and trading the environmental value of biomethane .....                                  | 45        |
| Valorizing biogenic CO <sub>2</sub> .....                                                        | 46        |
| Valorizing digestate as biofertilizer .....                                                      | 47        |
| 2.6 Innovation and cost reductions .....                                                         | 49        |
| Technology providers are constantly innovating .....                                             | 49        |
| Leveraging economies of scale and achieving cost reductions .....                                | 50        |
| 2.7 Key investment themes in 2025 and early 2026 .....                                           | 51        |
| US deals: A return to large-scale deals in 2026 .....                                            | 52        |
| European biomethane investment: Platform consolidation and de-risked scale-up .....              | 54        |
| Brazil's biomethane surge: Investors position ahead of policy shifts .....                       | 55        |
| Southeast Asia: Biomethane market momentum .....                                                 | 56        |
| Energy Majors: From acquisition to commercialization of biomethane/bio-LNG .....                 | 57        |
| <b>3. Europe remains the leading producing region .....</b>                                      | <b>59</b> |
| 3.1 European production hits 5 bcm .....                                                         | 59        |
| 3.2 The deployment of biomethane varies significantly among European countries .....             | 61        |
| 3.3 Thanks to its versatility, RNG can adapt to changing end-use priorities .....                | 62        |
| 3.4 Strong EU regulatory framework, but some inconsistencies and gaps .....                      | 63        |
| 3.5 Cross-border trade is rising, but the market remains fragmented .....                        | 65        |
| 3.6 High sustainable biomethane production potential .....                                       | 66        |
| 3.7 REPowerEU target unlikely to be met, but accelerated growth anticipated .....                | 67        |
| 3.8 The European biomethane sector is at a decisive moment .....                                 | 68        |
| 3.9 A focus on selected European biomethane markets .....                                        | 70        |
| France: A model for European biomethane development .....                                        | 70        |
| Germany: Large biogas base, renewed momentum, but still missing a clear biomethane roadmap ..... | 72        |
| United Kingdom: Strengthening policy support and rising energy security imperatives .....        | 74        |
| Italy: Rapid biomethane expansion, although slower than expected .....                           | 76        |
| Spain: Strong investment momentum and a rapidly strengthening policy framework .....             | 79        |
| Poland: High potential, early market stage .....                                                 | 81        |
| Ukraine: An emerging biomethane exporter with large still untapped potential .....               | 83        |

|                                                                                                                    |            |
|--------------------------------------------------------------------------------------------------------------------|------------|
| <b>4. North America: The most dynamic RNG market globally .....</b>                                                | <b>84</b>  |
| 4.1 United States: The world's leading producer.....                                                               | 84         |
| US RNG production reached almost 4 bcm in 2024 .....                                                               | 84         |
| Federal and state policies have been critical to the RNG sector's acceleration.....                                | 85         |
| RNG demand for road transportation close to saturation .....                                                       | 87         |
| The expansion to non-road transportation applications opens massive potential demand.....                          | 88         |
| Export is an emerging large market outlet .....                                                                    | 89         |
| The RNG industry is poised for continued expansion targeting diversified market outlets.....                       | 90         |
| 4.2 Canada: RNG production grows exponentially .....                                                               | 91         |
| Canadian RNG production has doubled in just two years .....                                                        | 91         |
| Support at the federal level.....                                                                                  | 92         |
| RNG trends at the provincial level.....                                                                            | 93         |
| <b>5. China is moving to large-scale production .....</b>                                                          | <b>96</b>  |
| Bio-natural gas production is accelerating .....                                                                   | 96         |
| The sector has attracted a diversified portfolio of developers, including NOCs .....                               | 96         |
| BNG policy: market-building through access to the gas network and sale of certificates .....                       | 97         |
| Demand is increasing and new outlets are emerging .....                                                            | 99         |
| China is one of the most promising biomethane markets worldwide .....                                              | 100        |
| <b>6. India: New policy measures to accelerate the build-out of bio-CNG plants .....</b>                           | <b>101</b> |
| Policy incentives to support CBG and set up the ecosystem.....                                                     | 101        |
| Mandatory blending of CBG .....                                                                                    | 102        |
| Accelerated deployment: over 1,300 CBG plants in operation and under development .....                             | 103        |
| Growing investment by Indian oil and gas companies and the private sector.....                                     | 104        |
| The bio-CNG sector is poised to grow exponentially .....                                                           | 105        |
| <b>7. Southeast/Northeast Asia emerges as the next major growth region.....</b>                                    | <b>106</b> |
| Singapore is emerging as the trigger for biomethane development in Southeast Asia .....                            | 106        |
| Japan is entering the biomethane market with a strong vision .....                                                 | 107        |
| South Korea's biogas strategy and bio-LNG imports .....                                                            | 109        |
| Rising biomethane production and export projects in palm-oil producing countries.....                              | 109        |
| Indonesia: Over 100 bio-CNG plants by 2030.....                                                                    | 109        |
| Malaysia is developing the largest bio-LNG plant in the world .....                                                | 110        |
| Thailand: Accelerating bio-LNG development amid rising decarbonization pressures.....                              | 111        |
| Australia: New policies will boost biomethane production and uptake .....                                          | 112        |
| First biomethane plant in New Zealand and ambitious long-term goals .....                                          | 113        |
| <b>8. Brazil is positioning itself to be one of the leaders in the global RNG market .....</b>                     | <b>114</b> |
| RNG production capacity grew by 33% in 2024 .....                                                                  | 114        |
| The Fuels of the Future Law is a turning point for Brazil's RNG market.....                                        | 115        |
| Demand for RNG is growing sharply.....                                                                             | 116        |
| Addressing the logistical issue.....                                                                               | 117        |
| RNG sets to grow exponentially .....                                                                               | 118        |
| <b>9. More countries in Central and South America are adopting biomethane .....</b>                                | <b>119</b> |
| Mexico: The 2025 Biofuels Law promotes the production and injection of biomethane .....                            | 119        |
| First biomethane plants commissioned in Argentina, Chile, Colombia and Cuba.....                                   | 119        |
| <b>10. Conclusion: New drivers will lift RNG production at new heights, albeit more slowly than expected .....</b> | <b>121</b> |
| Bridging accelerating market demand with supply side challenges.....                                               | 121        |
| What could be the near-term (2030) biomethane production? .....                                                    | 121        |
| Long-term outlook: Biomethane's future is bright.....                                                              | 124        |
| <b>ANNEX 1: What is RNG (biomethane)? .....</b>                                                                    | <b>125</b> |
