About the author	1
Contents	2
Key Takeaways.....	3
Executive Summary	4
A technology-neutral, export-oriented and adaptive hydrogen strategy.....	4
Hydrogen demand: four key domestic applications	5
A growing pipeline of hydrogen projects, and the world’s largest pipeline of export projects	6
Deepened international cooperation and international partnerships	7
1. Policy and targets	9
1.1 Policy context	9
1.2 Australia’s National Hydrogen Strategy	10
1.3 Australia’s Technology Investment Roadmap.....	13
1.4 A key role for hydrogen and CCUS hubs.....	13
Australia’s hydrogen hubs and technology clusters.....	13
CCS/CCUS hubs and support to CCS	15
1.5 Financial support to hydrogen technologies.....	16
2. Domestic market development	20
2.1 Current and future hydrogen demand.....	20
2.2 Transport sector	22
Road transport and hydrogen refuelling stations	22
Hydrogen trains and ships.....	24
2.3 Hydrogen in the gas network	24
2.4 Industry (use as feedstock)	26
Clean ammonia.....	26
Green steel	29
Other industrial sectors.....	30
2.5 Power sector.....	31
3. Hydrogen production.....	33
3.1 Australia’s comparative advantages	33
A vast potential for both key production pathways.....	33
Production costs: achieving cost parity with higher emissions alternatives.....	33
3.2 Future hydrogen production	36
Global market potential	36
88 hydrogen projects in the pipeline as of July 2021	37
4. Hydrogen exports	41
4.1 Major export-oriented projects	41
4.2 International partnerships and international supply chains	44
Partnership with Japan.....	45
Partnership with South Korea	49
Partnership with Singapore	51
Partnership with Germany	52
Conclusion	55
Annex 1: States and Territories in Australia	57
Annex 2: Australia’s hydrogen technology clusters	58
Annex 3: Hydrogen projects in Australia.....	59
Annex 4: CCS and blue hydrogen projects in Australia	64
Main Abbreviations.....	67
List of Tables, Figures, Maps and Boxes.....	69
